

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

The core function which creates the preview was easy because it was mostly a matter of adapting it to encapsulation rather than developing it from scratch.

2. What parts of encapsulating your logic were hard?

What was hard was not the matter of logic but learning understanding abstraction specifically in the context of encapsulation.

3. Is abstracting the book preview a good or bad idea? Why?

It is a good idea, it increases the security and efficiency of the code.
